

ClearNet Solutions

Secure WiFi Solutions

ClearNet offers secure WiFi solutions to protect businesses while providing fast, reliable internet access for customers.

Ensure your business network remains secure and private. Our WiFi solution keeps business access separate from customers. With our captive portal system, only verified users can connect, minimizing unauthorized activity.

How It Works

1. **Automatic Connection:** Devices automatically connect to the WiFi network if your carrier or provider is part of the carrier offload data program.
2. **Manual Connection:** If your carrier or provider is not included, connecting is still easy. Simply use our captive portal to log in and gain access.

Service Benefits

- **Secure Monitoring Function**
Advanced security reduces exposure to fraudulent activities.
- **Automatic Connections**
Users can connect automatically or via a secure captive portal.
- **Captive Portal**
Terms acknowledgment help mitigate legal liabilities.
- **Legal Protection**
Provides proof of secure network for internet providers.
- **Speed Tapering**
Reduce unauthorized streaming or pirating by controlling speeds.
- **Business-Only Access**
Keep your private WiFi network secure and separate from customers.

Setup Process

We plug our hotspot into your existing router, and you're ready to offer secure WiFi to your business. There's no need for complicated equipment adjustments. Simple & Seamless!
